

Proposed Network Connectivity & Surveillance Solution for Kumbh Mela 2027

AnexGATE **ACE** : All-in-One Smart Appliance.

Background

The Kumbh Mela 2027, expected to be held in Maharashtra, will once again bring together millions of pilgrims, security forces, and administration teams - making it one of the largest mass gatherings in the world. The planned event area is projected to span approximately 30 kilometers, involving hundreds of temporary security booths, surveillance points, and service stations.

Managing this scale of deployment demands a highly reliable, compact, and rapidly deployable solution that ensures secure communication, live surveillance, real-time data transfer, and centralized monitoring - all without relying on large infrastructure or complex cabling.

Our Proposal: All-in-One Network & Surveillance Solution Using AnexGATE **ACE**

We propose equipping the entire Kumbh Mela zone with **AnexGATE ACE** - a smart, all-in-one network appliance that simplifies deployment, reduces hardware clutter, and enables full-scale connectivity and monitoring across the 30 km stretch.

If this opportunity is awarded, we are fully capable of providing:

Complete Field Connectivity & Surveillance

- ACE devices installed every 500 meters to 1 km, based on density and risk zones
- Each unit supports IP cameras, IP phones, access points, PCs, and printers
- Real-time surveillance feeds from all zones to the HQ or command center
- Reliable internet access to on-ground teams via broadband + SIM failover
- Local booths get secured Wi-Fi + wired LAN for devices and officials

Centralized Monitoring & Control

- Every ACE connects via SSL VPN tunnels to a central data center
- Live dashboards via AnexHUB Cloud Controller for health, usage & performance
- All devices can be configured and updated remotely, without on-site IT

Data Security & Compliance

- End-to-end encryption ensures that surveillance feeds, voice calls, and data logs are protected
- AnexShield provides built-in web filtering, DNS control, and threat prevention
- Helps comply with Government standards for secure digital operations

On-Ground Utility

- IP phones allow booth-to-HQ direct calling
- Access Points power secure Wi-Fi for police and field staff
- Printers/biometric systems supported via USB and LAN
- No local servers or multiple devices required – everything runs on one box

AnexHUB + AnexShield : Centralized Control and Security

AnexHUB

Cloud Management & Zero-Touch Deployment

AnexHUB is a centralized cloud-based platform built for managing AnexGATE ACE devices across distributed environments. It enables network administrators to:

- Deploy ACE devices using zero-touch provisioning (ZTP), eliminating manual setup
- Perform remote configuration, software updates, and policy enforcement
- Monitor network health and bandwidth in real-time, across all locations
- Receive automated alerts for performance issues, link failures, and policy violations
- Scale effortlessly across hundreds of ACE deployments, with complete control from a single pane of glass

AnexHUB significantly reduces the manpower, complexity, and downtime involved in traditional network rollouts, making it ideal for large, temporary event setups like Kumbh Mela.

AnexShield

Cloud Web Security & Threat Prevention

AnexShield is a cloud-delivered security layer natively integrated with ACE and managed via AnexHUB. It protects connected devices and users with:

- Domain and Application Filtering to block access to high-risk or non-compliant web services
- URL Filtering, SafeSearch Enforcement, and YouTube Mode to prevent inappropriate content
- Real-time threat intelligence for detecting and blocking phishing, malware, ransomware, and botnets
- Split DNS configuration and user-based policy controls to customize access per department or location
- Central policy management to ensure uniform enforcement across all ACE-deployed sites

AnexShield operates effectively across both broadband and cellular (SIM) connections, ensuring consistent security coverage even in remote or rapidly deployed field environments.

✓ Advantages

Benefit	Description
All in One Appliance	Router, switch, PoE, SIM – one device
Fail-Safe Connectivity	Dual WAN + SIM failover for always-on access
Live CCTV Monitoring	Central feed monitoring through VPN tunnels
Secured Communication	IP Phones connect directly to HQ
Instant Internet Access	For police, medical, or booth officials
No Technical Manpower Needed	Zero-touch provisioning with remote updates
Scalable Deployment	Easily expand to 50+ sites with central control
Power Efficient & Compact	Minimal cabling and fewer power points
Printable Reports/Docs	USB/Printer-ready setup for document handling

✓ Conclusion

AnexGATE offers the Maharashtra Government a fast, secure, and scalable solution for managing the digital infrastructure of Kumbh Mela 2027. Our all-in-one approach ensures real-time surveillance, encrypted communication, and centralized control with minimal hardware and quick deployment.

Built for large-scale events, this solution is future-ready and can be reused for e-governance, disaster response and other public safety applications beyond the Kumbh.
