

Secure Network & Endpoint Solutions for Manappuram Home Finance

Objective

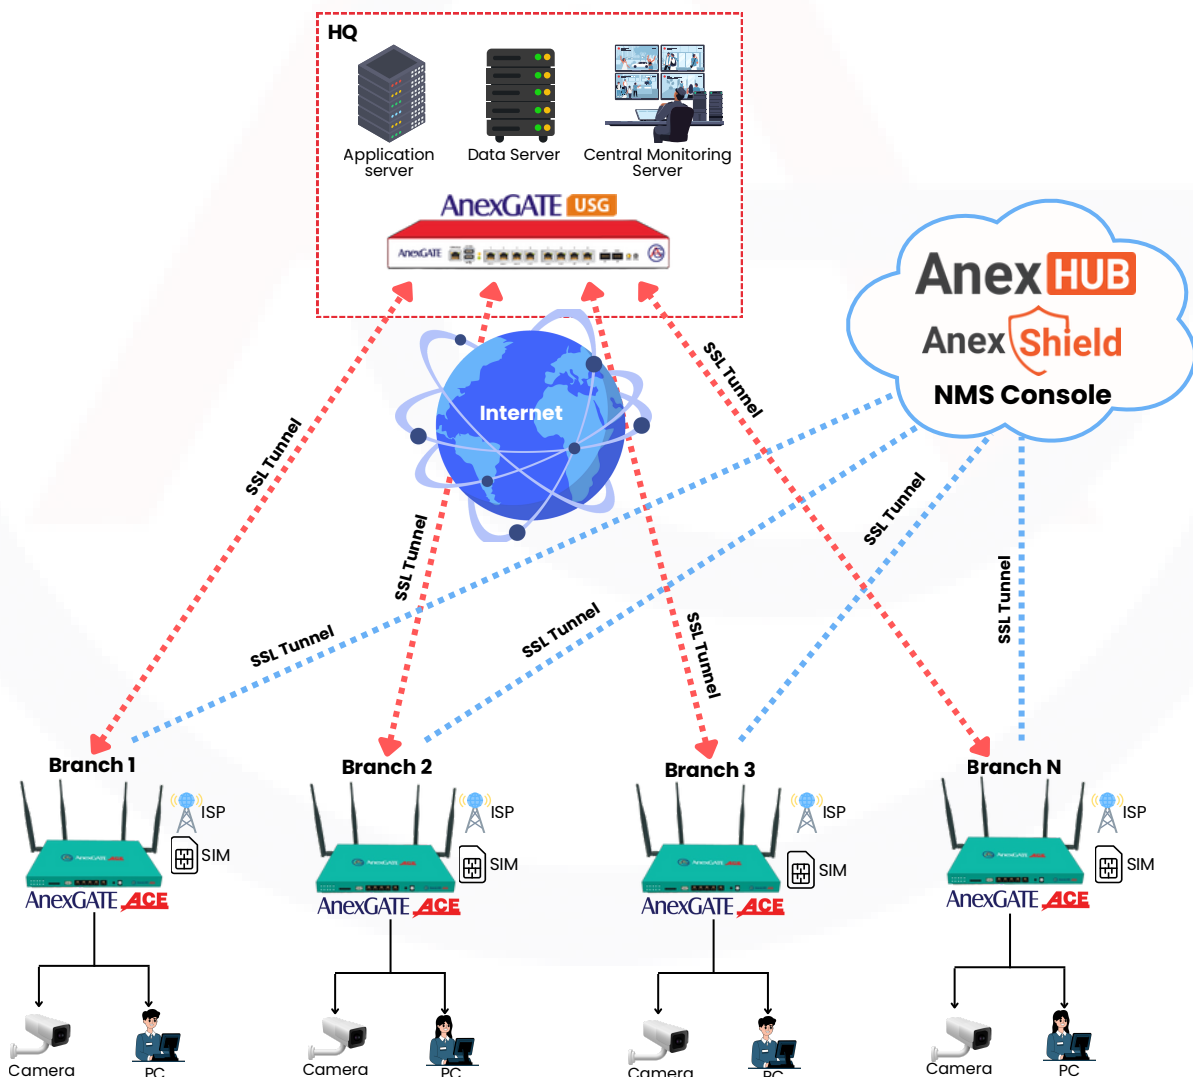

To provide a unique, scalable, and secure network infrastructure tailored to the specific operational requirements of Manappuram Home Finance, ensuring seamless connectivity across branches, centralized monitoring, secure internet access, and reliable support for field teams.

This document outlines three strategic solution offerings:

- Enterprise SD-WAN with Central Firewall
- SD-WAN with Existing HQ Firewall
- Roaming Client Solution for Field Staff (Windows Agent)

Solution 1: SD - WAN with AnexGATE **USG** at HQ & AnexGATE **ACE** at Branches

This solution provides a complete secure network framework by combining AnexGATE USG at the Head Office, AnexGATE ACE SD-WAN appliances at each branch, and cloud-based orchestration and security.

Core Components & Features:

1. **AnexGATE (Unified Security Gateway) at HQ**

- Acts as a central firewall and VPN concentrator
- Enforces access control, content filtering, bandwidth shaping, and VPN policies
- Provides integrated DPI, firewall, and advanced routing
- Enables secure inbound/outbound connectivity and segmentation

2. **AnexGATE Devices at Branches**

- All-in-one SD-WAN appliance with built-in router, switch, PoE, SIM & dual-WAN support
- Auto-failover between broadband and SIM for uninterrupted connectivity
- VPN tunneling to HQ with real-time traffic shaping and failover tracking
- Provides PoE ports for powering IP phones, cameras, access points directly

3. **Anex (Cloud Controller)**

- Zero-touch deployment and centralized configuration of all ACE and USG devices
- Bulk rollout, firmware upgrades, real-time monitoring, policy enforcement
- Multi-site visibility through a single dashboard, accessible remotely

4. **Anex (Cloud Security Platform)**

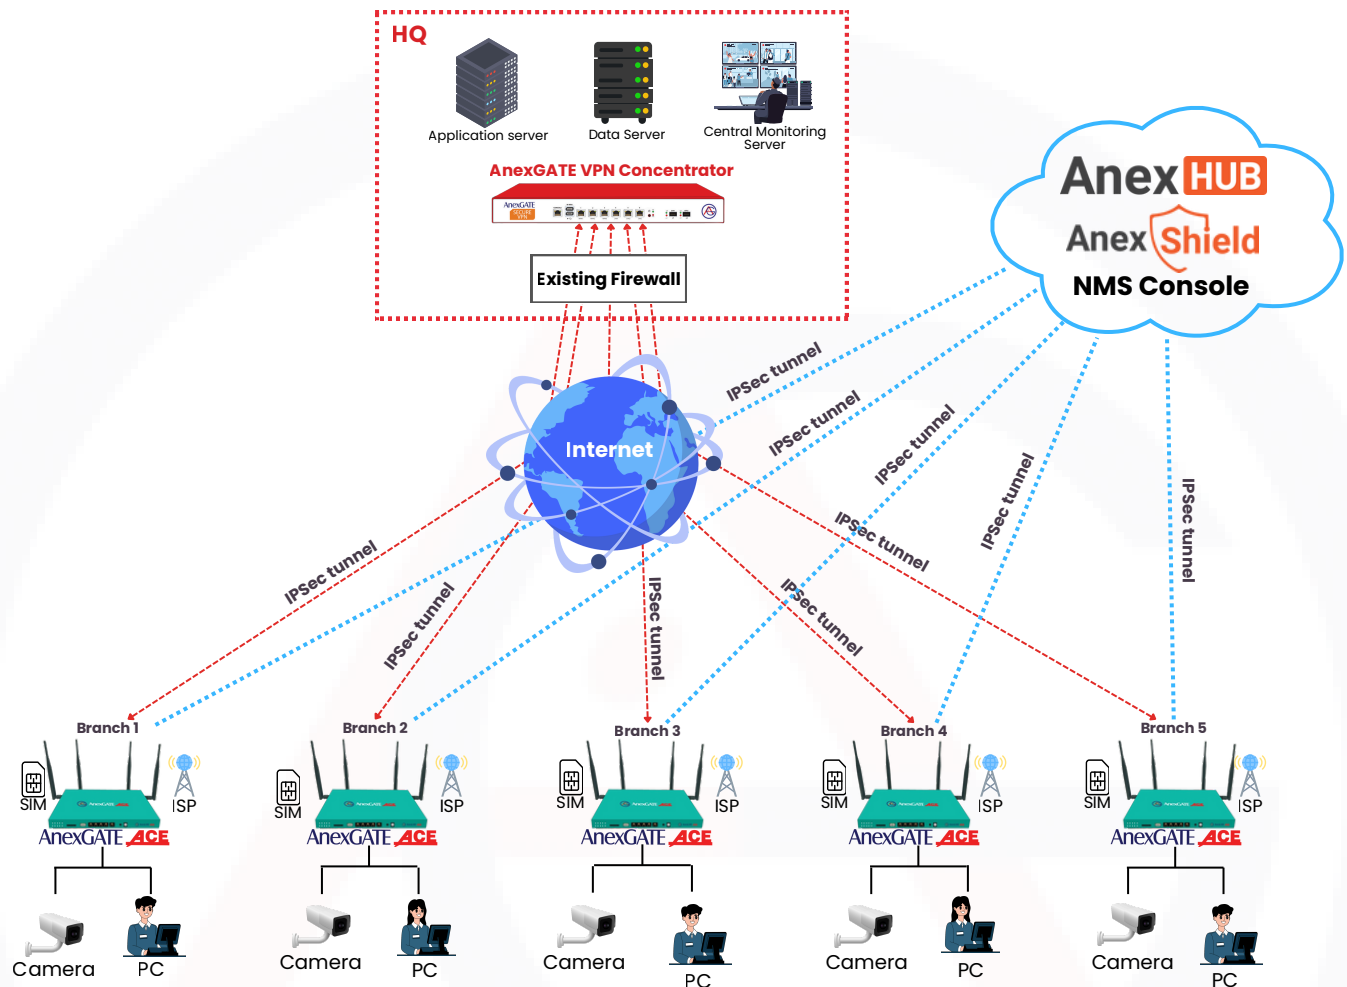

- DNS and application filtering to block malicious, adult, and unproductive content
- Enforces SafeSearch, category-based blocking, and malware protection
- Works across broadband and SIM without needing local firewalls at each site

Advantages to Manappuram:

- Complete visibility and control over all branch connectivity
- Enforced security policies centrally from HQ
- Reduces hardware clutter — ACE replaces router, switch, firewall at branches
- Auto-failover ensures zero branch downtime
- Scales across 100s of branches with minimal IT support
- Faster field rollout and central management of configurations

Solution 2: SD-WAN with Existing Firewall at HQ

If Manappuram prefers to retain its existing firewall setup at the HQ, AnexGATE can seamlessly integrate the SD-WAN solution without replacing the core firewall.

Components & Features:

- Existing firewall continues to manage policies at HQ
- ACE devices at branches handle routing, VPN, auto-failover, PoE
- AnexHUB is used for provisioning and remote configuration of branch devices
- AnexShield enforces security policies across branch user traffic
- Full compatibility with third-party HQ firewalls (Fortinet, SonicWall, Sophos, etc.)

Advantages:

- Preserves Manappuram's existing firewall investment
- Adds branch-level intelligence, security, and failover with ACE
- Simplifies branch expansion without touching HQ architecture
- Retains full control with minimal changes at central IT level

Solution 3: Roaming Client for Field Workforce (Windows Agent)

To support marketing staff and mobile employees working from laptops, we propose deploying AnexShield Roaming Agent.

Key Capabilities:

- Lightweight client installed on Windows devices
- Applies DNS-based filtering and category controls across all networks
- Enforces security policies on public Wi-Fi, home networks, or hotspots
- Logs browsing history, application usage, and time spent on each site
- Reports are available centrally through the AnexHUB dashboard

Benefits:

- Enables compliance enforcement for field users
- Gives IT visibility into how laptops are being used outside the office
- No VPN required; secure and efficient at the DNS level
- Simplifies endpoint protection without traditional endpoint firewalls

Common Benefits Across All Solutions

- Unified dashboard for HQ + branch + roaming user visibility
- Zero-touch deployment at any location, saving time and manpower
- Real-time traffic reports, alerts, and usage logs
- Auto failover and 4G SIM backup ensures 99.99% uptime
- AnexShield ensures uniform policy enforcement across the organization

AnexGATE's SD-WAN and security framework is uniquely positioned to support Manappuram Home Finance's hybrid working model, distributed operations, and evolving security needs - with a single, integrated platform.
