

AnexShield with ISP: Cloud Web Security for Safer, Smarter Internet Delivery

Overview

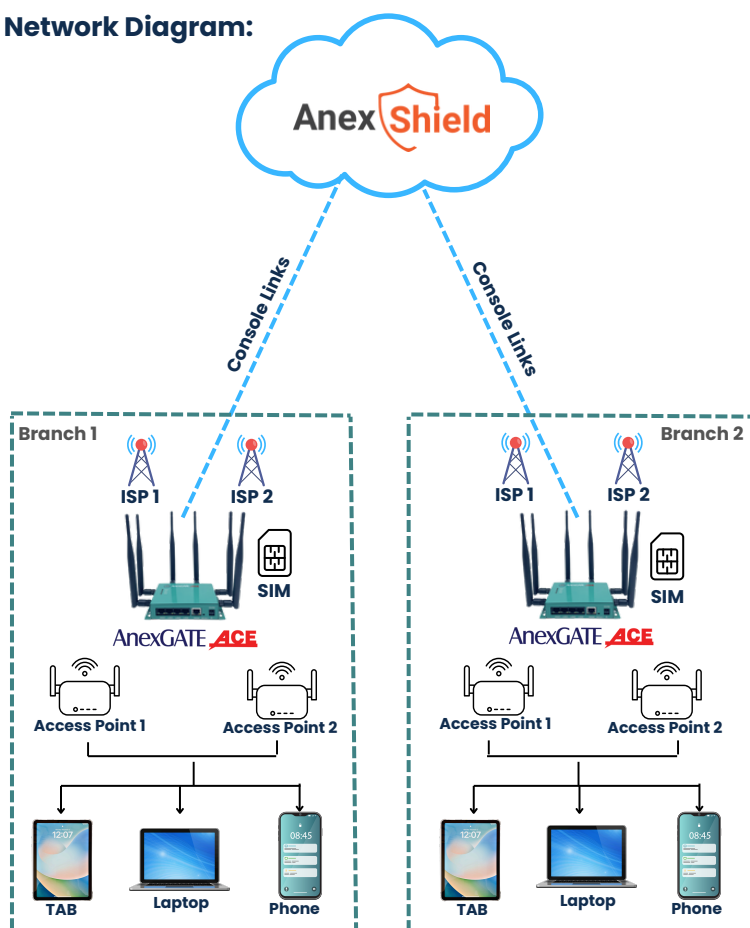

As broadband services scale across home and enterprise users, ISPs face increasing pressure to provide a secure, policy-compliant internet experience. From blocking harmful websites to preventing malware threats and enforcing content restrictions, traditional routers and open networks fall short. Without integrated filtering and threat prevention, ISPs risk customer dissatisfaction, regulatory issues, and higher support volumes.

The Solution

AnexGATE's AnexShield is a cloud-delivered web security platform that adds deep threat protection, content filtering, and access control to ISP networks without changing existing infrastructure. By integrating AnexShield into their service layer, ISPs can offer a safer, smarter, and more customizable internet experience to all subscribers residential, business, or public Wi-Fi.

AnexShield works seamlessly with existing broadband setups and can be bundled with routers, hotspots, or enterprise lines to deliver built-in protection, user-level filtering, and reporting capabilities all managed from the cloud.

Network Diagram:

Key Features

- **Cloud-Based Web Filtering:** Block adult content, malware, social media, or custom categories based on user profile or policy.
- **Threat Detection & Prevention:** Stop phishing, botnets, and malware attempts before they reach the user.
- **Profile-Based Access Policies:** Define separate access rules for homes, schools, offices, or public users.
- **Real-Time Reporting & Logs:** Track browsing history, threat events, and access violations centrally.
- **No Local Hardware Changes:** Works with existing ISP infrastructure and CPE devices via cloud integration.

Advantages & Benefits

- **Secure Browsing for All Users** – Protect customers from malicious content
- **Regulatory Compliance** – Enforce age-based or government-mandated content filters
- **Centralized Policy Control** – Apply and update rules across the network instantly
- **Flexible for All Use Cases** – Homes, cafes, schools, and small offices
- **Visibility & Reporting** – Get actionable insights into user traffic and threat trends
- **Value-Added Service Layer** – Offer as a premium plan add-on for revenue growth

Why Choose AnexGATE

- **True ISP Partner** – Add web security without extra hardware
- **ISP-Scale Protection** – Built for high-volume, multi-user networks
- **Instant Scalability** – Apply filters and onboard users in minutes
- **Fully Customizable** – Cloud-managed rules and branded experiences
- **Future-Ready Security** – Protect users today, evolve with tomorrow's threats
